Tran. of Soviet Med. (USSR) 1962, v. 25,
no. 1, p. 145-147.

DESCRIPTORS: *Rheumatic diseases, Therapy.

The recurring forms of rheumatic chorea include recurrences of choreic hyperkinesia resembling the trace reactions that follow an episode of rheumatic chorea. With a pseudorecurrence there are no signs of exacerbation of the rheumatic process. Identification of pseudorecurrences is of theoretical value in understanding the pathogenesis of trace reactions. It is also of practical value because they require special anti-rheumatic treatment. The administration of restoratives, sedatives, and soporifics is recommended for pseudorecurrences of chorea. DESCRIPTION: *Leukocytes, *Diseases, *Inflammation, Medical examination.

Examination was made of the focus of inflammation of 127 patients with various forms of acute appendicitis to investigate the relation between the leukocyte reaction and the disease. Leukocytosis was evident in most patients. More specifically, the deeper the inflammatory process in the wall of the vermiform appendix, the more infrequent and less evident was the leukocyte reaction at the inflammatory focus as compared with (Biological Sciences - Pathology, TT, v. 11, no. 5)
